

Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau

TEAM ID	SWTID -2026-5976
PROJECT TITLE	Visualizing housing market trends: an analysis of sale prices and features using tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

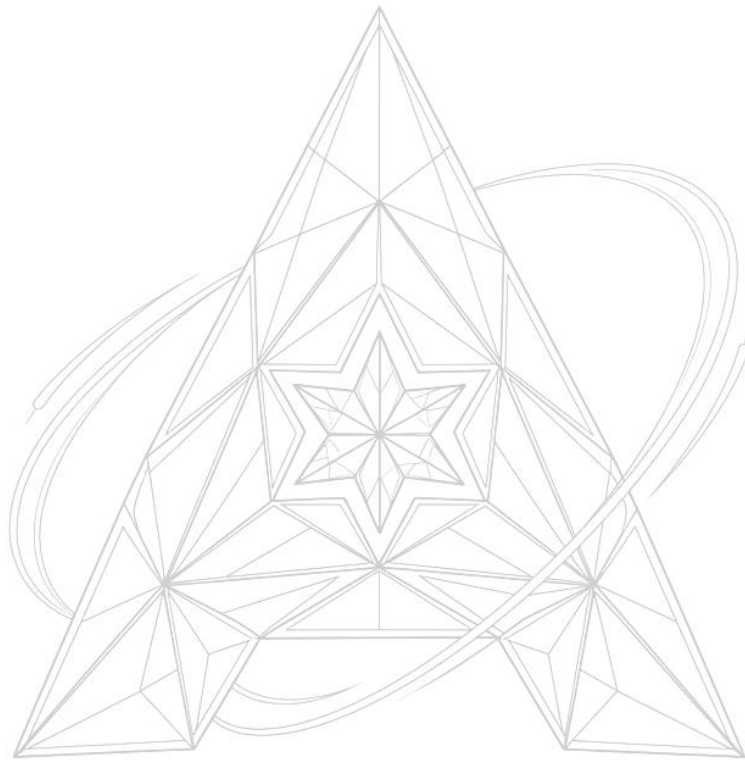

We need to look at what's happening in the housing market and how much houses are selling for. The housing market trends and property sale prices need to be analyzed. We have to find out what things make property values go up or down. Compare houses based on things like how big they're where they are how many bedrooms and bathrooms they have and how old they are. The goal is to help buyers, sellers and real estate investors make decisions based on facts. We want to make it easy for people to understand the information by using pictures and graphs. Housing market trends and property sale prices are very important. We have to get the housing sales data into Tableau. Then we need to clean up the data so it is good to use. We will make pages with filters and drill-down capabilities that people can use to look at the data. These pages will show us things about how the housing market is doing, like key performance indicators such, as housing market trends and property sale prices We have a line chart that shows how housing prices change over time.

This helps us see the year-over-year growth in housing prices. We also compare the trends on an yearly basis to understand the sales pattern. Dashboard Property Feature Analysis scatter plot helps us see how sale price relates to footage.

This is useful to know if bigger homes cost more. A bar chart shows the price of different types of properties. This helps us compare prices across property types, like apartments, houses, etc. A heat map shows how the number of bedrooms and bathrooms affects the price. This helps us see which features increase the price of a property. A filled map shows how housing prices vary by region. This helps us see which areas have property prices. We also compare
