### 3.4 – Technology Stack

**investors and real estate analysts.** The tools and technologies used for the project "Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau" include data collection, storage, processing, analysis and visualization. Housing market data comes from real estate databases, public housing datasets, CSV files and property listing platforms. We. Manage the data using Microsoft Excel or MySQL. We. Preprocess the data to remove errors and prepare it for analysis. We use Tableau to create dashboards, KPI cards, maps and charts. Tableau connects to our datasets. Helps us find trends in housing prices and relationships between property features and sale values. We use SQL queries and spreadsheet functions to do calculations and transform data when needed. The project relies on Tableau for data visualization and business intelligence. Tableaus capabilities support identifying trends and relationships, in housing market data.

The system works on computers that use Windows or macros. Tableau Desktop is the tool we use to make things. We use Tableau Public or Tableau Server to share our work with people. This setup is really good for taking data about the housing market and turning it into pictures that make sense.

It helps people who buy houses sell houses invest in houses and people who work with houses make decisions based on the data.

The system is easy to use. Can handle a lot of information. Tableau Desktop and Tableau Server are important, for this process. They help us share our findings with buyers, sellers,
