

visualizing housing market trends an analysis of sale prices and feature using tableau

1.2 – Purpose of the Project

The goal of this project is to look at what's happening in the housing market and see how the prices of houses are connected to things like the number of rooms and the size of the yard. We are using Tableau to make pictures and graphs that show what is going on in the market. The project is taking a lot of information about houses and turning it into things that're easy to understand so we can see what makes a house more or less valuable.

We are making pages with Tableau that show all this information in a way that is easy to look at. This project is helping us learn how to work with data and make it into pictures and graphs that people can use to make decisions when they are buying or selling a house. This project is something we have to do for a time to get some experience working with data and using tools, like Tableau.

The purpose of this housing market project is to look at housing market trends. It does this by examining the relationship between the prices of houses and things like the location and size of the houses using Tableau. The housing market project wants to take housing data and turn it into simple pictures that help people see what things affect the prices of houses like where the house is how big the house is and how many rooms the house has. The project makes pages on the computer that people can use to see what is going on in the housing market. These pages help people compare the prices of houses and make good decisions when they are buying or selling a house. This helps people who are buying houses people who are selling houses and people who work with houses for a living to understand what is going on in the housing market and make decisions because they have good information, about the housing market.
