

Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau

CHAPTER – II

IDEATION PHASE

2.1 – Purpose of the Project

This project aims to find out how things like lot area number of bedrooms, bathrooms, living space, location and overall property quality relate to sale prices. By analyzing these factors we can see how they impact the price of a house. The goal is to make it easy to see and understand these relationships through data visualization, in Tableau. Sale prices and property features are the focus of this analysis.

The main goal of this project is to take housing market information and turn it into useful pictures using Tableau. This project helps people who care about this information by showing them patterns, comparisons and connections in a way that's easy to look at and understand. The housing market data is presented in pictures and stories that show what is happening in the market. This helps people who are interested in the housing market understand what is going on figure out how much properties are worth and make decisions when it comes to real estate. The project uses Tableau to make the housing market data more meaningful and easier to understand. The goal is to help stakeholders make decisions, about the housing market by giving them a better understanding of the housing market data.
