3.3 – Data Flow Diagram

The Data Flow Diagram for the "Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau" project shows how the housing market data moves through the system. It starts with getting data from places like real estate databases and housing sales records. We also get data from property listings and public datasets. This data tells us things like how much houses cost how big they're how many bedrooms and bathrooms they have. It also tells us where the houses are, when they were built and other things about the properties. The data we collect is then put into a place where we can store it. We make sure the data is correct and consistent by cleaning it up and checking it. The Data Flow Diagram for the "Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau" project is used to move the housing market data to the step. Once the data is all cleaned up we use Tableau to look at it and make sense of it.

Data Flow Diagram – Visualizing Housing Market Trends: An Analysis of Sale Prices and Features Using Tableau

The Data Flow Diagram is like a map that shows how housing data moves from the start to the end. It helps us understand how we get housing information work with it and turn it into something that makes sense using Tableau.

Visualizing Housing Market Trends: An Analysis of Housing Sale Prices and Property Features Using Tableau

Data source

Housing Dataset (Property Details, Sale Prices, Location, Features)

Data Processing & Cleaning

Tableau Visualization System

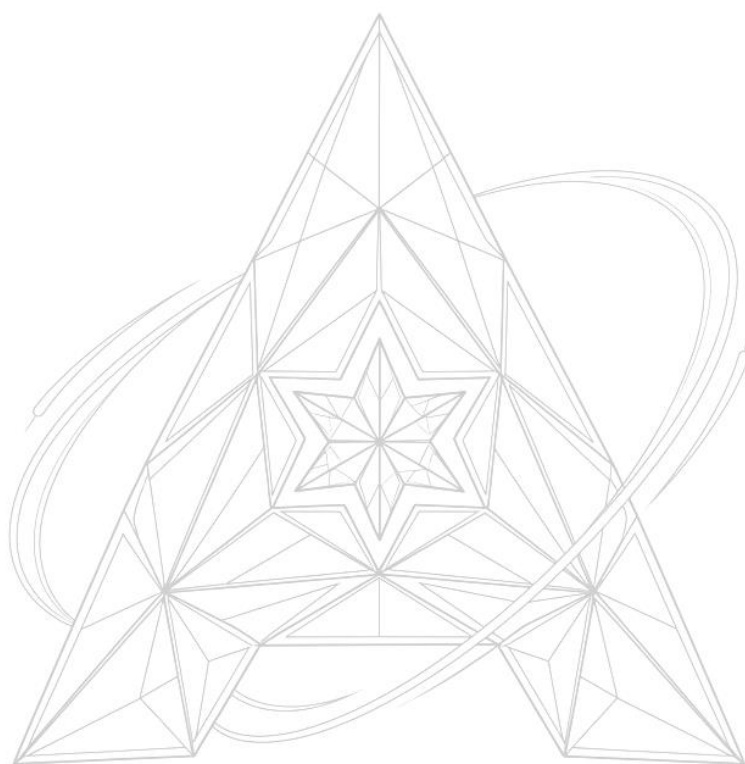

Interactive Dashboards & Reports

Users (Buyers, Sellers, Real Estate Analysts)

We start by collecting housing data. This data has things like property prices, where the houses how big they are and what features they have. We clean up the data to make sure it is correct. Then we put the cleaned up data into Tableau. In Tableau we use charts and graphs to look at the data. We also make dashboards. These dashboards help people understand what is going on in the housing market. They show us how prices are changing and what features are important. This helps Users like Buyers Sellers and Real
